

Portfolio proposal

Sep 23, 2026 · @Someone

A single page, under 14 kilobytes compressed, makes one argument in two parts. The written work proves Wan Zayd’s engineering. The page itself proves his taste, because he builds it and no photograph or screenshot stands in for it.

The page exists because the only document describing his work belongs to AvePoint. It is a third-person staffing profile with no room for taste, voice or craft.

It also has to reach readers outside low-code. They see five years and the title OutSystems Technical Lead, and cannot judge the distance between them. So the site describes his decisions first, such as row locking under enrolment load, and names the platform second.

The engineering: three Main Projects

Three projects carry the engineering argument. Each gets a semi-detailed explanation: problem, decision, trade-off, role and team, outcome and tools.

Project	For	His role	Key decision	Outcome
Digital Form	Maybank	Technical Lead, Product Owner, sole developer	Extensible question types	Over 80 forms and thousands of users by the fifth MVP
MyInsights	PETRONAS, via FPT Software	Developer in a team of four	Fixed roles tied to business rules	Audit exceptions moved from paper into the system
iZone rebuild	Sunway University, via AvePoint	Senior Technical Lead of three developers, himself included	Row locking for enrolment	Load-tested at 40,000 enrolments in 20 minutes; deployed to live

Around the Main Projects

Eight Minor Projects sit in a less highlighted list. Each has a name, one line, its employer and its tools.

Project	Employer	Tools	One line
CAB-Q	Maybank	OutSystems O11	Deployment approval tool; cut a daily process from 6 hours to 30 minutes
Audit Log	Maybank	OutSystems O11	Standardised audit logging, adopted across every OutSystems application
Tokenizer	Maybank	OutSystems O11	Tokenisation for public display strings, with an encrypted database
MPowered	Maybank	OutSystems O11	Stability and defect work on the internal agile project management platform
RPSST	Maybank	OutSystems O11	Prototype to modernise legacy RBS transaction processes
VIP Dashboard	Impact Business Solutions	Power BI, QGIS	Visualisations of Sarawak data for a VIP presentation
QR Asset Management	Impact Business Solutions	Flutter, Firebase	QR-based asset tracking
Adam Digital Assets	Adam Digital Assets	Flutter	Islamic mosque signage app with a website twin, built by two developers

The rest of the page:

- **How I work:** one short paragraph, in his words, on architecture calls and running a team.
- **Qualifications:** two OutSystems certifications, Professional Scrum Developer, and two UiTM awards, shown as minor items near the About text.
- **Contact:** email and LinkedIn. No CV download.

The timeline covers five years across five employers, newest first, with clients nested under their employer. Periods show month and year only, and the current entry reads "present".

Period	Employer (client)	Role	Type
Jan 2026 – present	AvePoint	Full Stack Developer / Technical Lead	full-time
Apr 2026 – present	↳ Sunway University	Senior Technical Lead	—
Sep 2024 – Jan 2026	Maybank	Senior Outsystems Developer	full-time
May 2024 – Jul 2024	Adam Digital Assets	Flutter Developer	part-time
Sep 2022 – Sep 2024	FPT Software Malaysia	Software Engineer	contract
Sep 2022 – Sep 2024	↳ PETRONAS Digital	Outsystems Developer (FPT Payroll)	full-time
Apr 2022 – Aug 2022	Career break	Personal goal pursuit	—
Apr 2021 – May 2022	Impact Business Solutions	Software Engineer	contract

What he will defend

Every project names its tools, and only tools Wan Zayd will defend under questioning: OutSystems O11 and ODC, SQL and Aurora PostgreSQL, REST and integration work, and architecture practice such as C4 diagrams and technical design documents. React, AWS and .NET/C# stay off the page, though his LinkedIn lists them. Flutter appears only on the Minor Projects that used it.

The taste: a 14 kilobyte page

The whole page aims to stay under 14 kilobytes compressed, so it loads on 3G without waiting. The figure is a target, not a limit. A web font or a photograph would each cost more than the page can afford, so both stay out and the typography carries the design.

Marks are the only images. Five organisations have compact vector marks, costing 6,267 bytes together, and they appear wherever an employer, client or tool is named. The rest appear in type. With the prose, markup and stylesheet estimated at 5 to 6 kilobytes, the page comes to about 11 to 12 kilobytes, inside the target. That estimate has not been checked against a built page.

This proposal sets the budget, not the look. Colour, type and layout belong to the artistic direction, which Wan Zayd will set in a separate document, using a skill he builds for it.

What it leaves out

- **A blog:** writing is a continuing commitment, not a build, and can be added later without a rebuild.
- **Social reach:** this is a portfolio, not a following.
- **A custom domain:** GitHub hosting is free; the cost is that his name is harder to find in search.
- **Any server, form or database:** email and LinkedIn do the same job, and nothing can break.
- **A CV download.**
- **Music and session work:** the site stays strictly professional.
- **The Maybank design-ownership story:** Claude recommended it as design evidence; he chose to leave it out.
- **Relative time:** no "currently", no "last updated". Undated content cannot look abandoned.

How it runs

No date drives this work; it is a continuing personal project, built in stages. The site runs on GitHub at no cost. If GitHub is down, the site is unreachable and no fallback exists, and he accepts that because the page carries nothing urgent. JavaScript is used only where CSS cannot do the work, so a dropped connection still leaves readable content.

The one thing that can go stale is the timeline's "present". If he changes employer and does not update the page, that entry becomes wrong.

Decisions on record

Wan Zayd publishes client detail from Maybank, PETRONAS, Sunway University and Sarawak without restriction. Claude advised against it, and he overruled it. He also shows client marks, including PETRONAS, though a displayed mark can imply the client endorses him.

Assumptions

- Each Main Project explanation runs to about 1,500 characters.
- Marks appear at compact size, not as full wordmarks.
- Wan Zayd writes the words and directs the design; Claude implements.

Open questions

- What MStatus is.
- The year of each certification.
- His email address.
- The About and How I work text, which he writes.
- The real page weight, measured once the page is built.
